## DETAILED ACTION

### *Election/Restrictions*

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 12-25 and 27, drawn to a thiourea/pharmaceutical composition comprising a thiourea.

Group II, claim(s) 26, drawn to a method of lightening, whitening or depigmenting the epidermis, removing skin blemishes or preventing pigmentation.

Group III, claim(s) 28, drawn to a method of treating ageing.

Group IV, claim(s) 28, drawn to a method of treating dry skin.

Group V, claim(s) 28, drawn to a method of treating fatigue.

Group VI, claim(s) 28, drawn to a method of treating wrinkles.

Group VII, claim(s) 29, drawn to a method of inhibition of tyrosinase.

Group VIII, claim(s) 30, drawn to a method of inhibition of the synthesis of melanin.

Group IX, claim(s) 31, drawn to a method of reduction of hyperactivity of melanocytes.

Group X, claim(s) 32, drawn to a method of treating or preventing lesions of cells and DNA of the human body.

Group XI, claim(s) 33 and 34, drawn to a method of preventing the appearance of cancer.

Art Unit: 1616

The inventions listed as Groups I-XI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Bachelard et al. disclose a thiourea of the chemical structure  $(\text{CH}_3\text{SO}_2\text{CH}_2\text{CH}_2\text{CH}_2\text{NH})_2\text{C}=\text{S}$ , which reads on the special technical feature of the instant invention, and that it is sparingly soluble in methanol and appreciably soluble in water and is weakly goitrogenic in the rat assay method (page 81, right column). It is the Examiner's position that Bachelard et al. fairly disclose a pharmaceutical composition of the instantly claimed thioureas of formula III when:  $m = n = 3$ ;  $R_1 = R_2$  which is a  $\text{C}_1$  alkyl; and  $R_3 = R_4$  which is hydrogen. Since the instant invention does not appear to make a definitive contribution over the prior art, then Unity of Invention is lacking and restriction is deemed proper.

A telephone call was made to Harold Fox on 11/09/07 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
